

Call for participation

C-CAMP Project: AI, Digitalization, Data and Creativity

C-Camp is one of the 4EU+ educational projects and involves the Universities of Copenhagen, Charles of Prague, Heidelberg and Milano. Starting from the goal of stimulating students in the use of artificial intelligence techniques, C-Camp proposes a 3-day workshop that will take place in Prague from 11 to 13 July 2022 for introducing students to various AI tools for the analysis of different types of information. Students will be able to discuss project ideas to be carried out in groups during the summer supervised by professors of the universities involved. At the end of August, an online event will be organized in which students will present the results of their analysis to a panel of professors from the universities involved.

More details on the educational project can be found on the website: <https://sites.google.com/view/c-camp4eu>

An online form is also available for registration (the deadline is May 31, 2022). A certificate of participation will be issued to the registered students that present the results of the analysis by the end of August.

Both BA and Master students from the University of Milan can register for the C-Camp project. A minimal knowledge of programming techniques is required.

A number of scholarships (around 400 euros each) will be made available for the participation to the Prague event. In case registrations exceed the number of scholarships available, interviews will be organized via Zoom and priority will be given to the students who can obtain greater benefit from this initiative.
